

BOILER UNIVERSITY

CERTIFIED BOILER OPERATION CLASS

A comprehensive program covering basic boiler room operation. This course is designed to expose attendees to how boilers are constructed, what support systems are required, how they operate and why. Course content includes topics listed below:

- Boiler Operations Principles
- Boiler Fittings
- Feedwater Systems
- Steam Systems
- Fuel Systems Draft Systems
- Boiler Water Treatment
- Boiler Operations Procedures
- Hot Water Heating Systems
- Boiler Operation Safety

Attendees who pass the boiler certification test will receive the Certified Boiler Operator certificate from the Iowa Association of Building Maintenance Engineers (IABME) and a WBC Boiler Certificate.

WBC MECHANICAL 4-HOUR BOILER TRAINING CLASS

This class will expose attendees on basic boiler operations. Attendees will gain a better understanding of healthy boiler systems and learn to diagnose problems and proper solutions. This class will include three hours of in class training and testing and one hour in your boiler room. Students will have hands on experience on the equipment that they run every day. This is one of the BIG benefits of our in-house training program.

Attendees of the four-hour training will learn:

Boiler system essentials including:

- Fuel efficiency
- The importance of feed water quality.
- Stack temps and what they mean.
- Daily tests and maintenance log essentials.
- Trouble shooting and much more

Students who pass the exam given at the end of this class will receive a certificate of completion.
